

Production Run Sampling - Infused Flower/ Pre-Roll

This pertains to any infused flower, trim or pre-rolls. A sample of at least 12 grams has been determined by the Department to be the quantity necessary for full testing, regardless of the production run size. Round up to the nearest gram when calculating 1% of the production run weight. For infused pre-rolls, based on total weight of the entire production run, select the lesser of 12 grams or 25 whole infused pre-rolls, whichever is the lesser amount (round up to nearest whole infused pre-roll). For other types of infused useable cannabis, select at least 12 grams total.
