CCB Launches Investigations into Three Nevada Dispensaries, Selling Potentially Unsafe Product

The Nevada Cannabis Compliance Board (CCB) has opened investigations into three dispensaries for selling product that twice failed microbial testing.

On March 5, 2020, the Department of Taxation and CCB issued a directive to all dispensary/retail stores to immediately stop selling the product, Cherry OG F3, which failed laboratory testing for yeast and mold, coliforms, Enterobacteriaceae and Aspergillus.

At that time, the CCB instructed dispensary/retail stores to destroy or return the affected product to the cultivator and communicate that they took such action with the State.

Despite the CCB's directive, it appears three dispensaries retained their inventory of Cherry OG and began selling the product again in May.

Approximately 375 grams of the Cherry OG product were sold between May 19, 2020 and June 29, 2020 at the following Retail Stores/Medical Dispensaries:

1. Waveseer of Las Vegas, LLC (Jenny's Dispensary), 5530 N Decatur Blvd, Las Vegas, NV 89130 (License # 83760475147127946601);
2. Paradise Wellness Center, LLC (Las Vegas ReLeaf), 2244 Paradise Road, Las Vegas, NV 89104 (License # 54283805068313943868); and
3. Desert Aire Wellness, LLC (Sahara Wellness), 420 E Sahara Ave, Las Vegas, NV 89104 (License # 25729455103203031356)

On May 16, 2020, a hold on the product was temporarily lifted due to a CCB error that occurred during an unrelated investigation. However, the CCB's health and safety advisory remained in effect; and under the directive, dispensaries should not have had the product in their inventory.

The CCB advises those who have purchased the product to avoid consuming it. Consumers should check any Cherry OG products for the source package # 1A404030000076F000006649. The CCB notified the aforementioned dispensaries and initiated investigations which are ongoing. There are no known reports of illness.
